Art Unit: 1644

Restriction to one of the following inventions is required under 35 USC 121:

I. Claims 1-7 and 17-21, drawn to in vivo imaging methods, classified in class 424, subclasses 9.6+, 131. 1 and 178.1+.

II. Claims 8-16 and 22-27, drawn to in vivo therapeutic methods using a conjugate with a photosensitizer, classified in class 424, subclasses 9.6+, 131. 1 and 178.1+.

The inventions are distinct, each from the other, because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP 806.04, MPEP 808.01). In the instant case the different inventions employ different conjugates having different moieties conjugated to the internal image antibody. These different moieties are used in materially different processes, namely imaging or therapy.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their divergent subject matter, restriction for examination purposes as indicated is proper.

For whatever group is elected the following election of species holds.

This application contains claims directed to the following patentably distinct species of the claimed invention: selecting a ligand to each of the various species of

Art Unit: 1644

biological receptors - e.g. those recited in claim 1 lines 4-5 or in claim 8, lines 4-5.

These receptors bind to a diverse set of ligands and would be related to a variety of dissimilar disease states. Thus a teaching of the imaging or treatment of a disease involving one of these receptors would not show or suggest the imaging or treatment of a disease involving one of the other recited receptors.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-27 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claim: are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1. 141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 1644

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
